

## Baseline study flora and fauna mangrove area Otrobanda

Curaçao, 2014 - 2015

### Client info:

Name: Domeinbeheer

Sector: Government

Location: Curaçao

Domeinbeheer is the official institution of the government of Curaçao in charge of government owned terrains, beaches, water, buildings and other real estate. Domeinbeheer is responsible for making government terrain available to citizens or businesses for the purpose of building houses or for commercial, industrial, touristic or agricultural use.

**Rationale:** The government of Curaçao is planning to improve the mangrove area in Otrobanda including improving the water quality and water replenishment and to make the area suited for recreational activities.

**Approach:** Conducted a qualitative inventory of the fishes, birds and reptiles, algae and all types of micro-organisms, all types of smaller animals like crabs and the flora present in the mangrove area.

**Outcome:** The results of this study serve as baseline for future monitoring.
