

## Investigation fat content in sewage water.

Curaçao, 2018

### Client info:

Name: Coral Estate association of owners

Sector: Transport and infrastructure

Location: Curaçao

Coral Estate is a resort located in the Bándabou area of Curaçao. Coral Estate is comprised of villas, apartments, undeveloped building plots, restaurants and a beach.

(source: [www.coralestatesales.com](http://www.coralestatesales.com))

**Rationale:** Coral Estate manages a (private) waste water treatment plant and also recycles water for use in horticulture. The Coral Estate association of owners has requested EcoVision to perform analysis of several wastewater streams in order to optimize their wastewater treatment process.

**Approach:** EcoVision sampled sewage water at selected locations. The water samples were sent to a laboratory in the Netherlands for analysis of the fat content.

**Outcome:** A report was submitted with the analysis results including an overview of the local regulations relating to discharge of fat onto (public) sewage systems.
