

## Support ESIA natural gas supply to WEB Aruba N.V.

Aruba, 2022

### Client info:

Name: Eagle LNG Partners LLC

Sector: Oil and Gas

Location: Aruba

Eagle LNG Partners LLC is a company that provides liquefied natural gas (LNG) for the marine and power generation markets in the Caribbean.

**Rationale:** Eagle LNG Partners LLC is planning to construct a new terminal on a brownfield site at the Refineria di Aruba (RdA) to store and re-gasify LNG in order to supply natural gas to WEB Aruba through a new underground pipeline. EcoVision was hired to conduct a nature survey in these areas and support Royal HaskoningDHV with the ESIA procedure.

**Approach:** The study consisted of terrestrial and marine surveys. For the terrestrial surveys an inventory was done of the vegetation and fauna present. For the marine surveys an inventory was done of the flora and fauna present. The fieldwork data was supplemented by data collected from interviews with experts and literature. The results were imported in GIS to create a spatial overview of the natural values. The results were interpreted, and recommendations were made for mitigation options. Furthermore, EcoVision provided support to Royal HaskoningDHV during the stakeholder meetings, public consultation, and reporting.

**Outcome:** The results of this study serve as baseline for the ESIA report made by Royal HaskoningDHV. The ESIA report is a supporting document for the permitting process.
